DETAILED ACTION***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/14/03 has been entered.

Allowable Subject Matter

2. Claims 1-59 and 61-72 are allowed.

3. The following is an examiner's statement of reasons for allowance: Claim 1 contains allowable subject matter for at least the reason that the prior art of record fails to teach or reasonably suggest a method of interrogating at least one fiber optic sensor, the sensor coupled to a pipe and sensing at least one parameter of a fluid in the pipe, the method comprising the generating, splitting, receiving and determining steps as claimed. While art such as Go (US 6,466,706) teaches generation, splitting and receiving steps similar to Applicant, the determining step of Go does not include the feature wherein a phase shift is indicative of a difference in arrival times of a reflected first light pulse from a second grating and a reflected second light pulse from a first grating as set forth by Applicant. Patent to Kersey (US 6,285,806) is also of interest for teaching a generating and splitting step, but likewise fails to teach the determining step of the instant application by at least failing to send both split light pulses through the sensor.

Art Unit: 2882

4. The apparatus of claim 13, drawn to an apparatus for interrogating at least one interferometric fiber optic sensor, the sensor optically connected between first and second reflective gratings and further coupled to a pipe, is similarly allowable for at least the reason that the prior art of record fails to teach or reasonably suggest the apparatus further comprising a narrow band light source, couplers and signal processing circuitry so as to result in the determination of phase shift as claimed.

5. Claim 32 similarly contains allowable subject matter for at least the reason that the prior art of record fails to teach or reasonably suggest a method for sensing fluid flowing within a pipe comprising the combining and determining steps as claimed.

6. Claim 53 similarly contains allowable subject matter for at least the reason that the prior art of record fails to teach or reasonably suggest an apparatus for sensing fluid flowing within a pipe comprising the narrow band light source, delay path, grating pair and signal processing circuitry as claimed.

7. The remaining claims are allowable at least by virtue of their dependency.

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Krystyna Suchecki whose telephone number is (571) 272-2495. The examiner can normally be reached on regular working days and hours.
